                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and profilerative disorders, wounds, and infectious diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleotide sequence is human KID DNA (SeqID 5) encoding a full length

New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation.
                                            Human; microtubule motor protein; gene; ds; cellular proliferation disorder; cancer; hyperplasia; restenosis; cardiac hypertrophy; immune disorder; inflammation; kinesin-like DNA binding protein; KID; autoimmune disease; arthritis; graft rejection; inflammatory bowel disease; angioplasty.
                                                                                                                                                     "Human microtubule motor protein #3"
                           Human microtubule motor protein DNA #3.
                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; SEQ ID NO 5; 26pp; English

Specifically, it refers to candidate agents that are eapable of modulating the activity of target proteins having motor or phosphate. Furthermore, this activity of nidirectly produces ADF or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene thereapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleotide sequence is human KID DNA (SeqID 1) encoding a full length KID enzyme of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ATPase activity, a methods of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such accorder, hyperplasias, restenoisis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders and inflammation, for treating disorders proliferation disorders and inflammation, for treating autoimmune disorders and inflammation, for treating autoimmune disorders and inflammation, modulatory bowel disease and proliferation induced after medical procedures including surgery and anglophasty. This sequence represents DNA encoding a human microtubile modulation of the invention of the invention when the content of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to new polymucleotides and polypeptides, useful for diagnosis and treatment of breast, lung and colon cancer. The sequences can be used in detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous. They can also be used to inhibit tumour growth by modulating expression of a gene product. AAS35943-AAS39333 represent novel human diagnostic and therapeutic coding
                                                                                                                                                                                                                                                    1356 AGAGAAGGACCTAGAGATTGAGAGGCTTAAGACGAAGCAAAAAGAACTGGAGGCCAAGAT 1415

                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polynucleotide comprising a sequence selected from 183 human DNA sequences (appearing as ABK70130-ABK70312), or their fragments, homologues, variants or complements and their encoded polypeptides. Also included are an expression vector comprising the colypeptides. Also included are an expression control sequence; a host cell transformed or transfected with an expression control sequence; a host cell transformed or transfected with an expression vector of; an isolated contibiod, or its antipod, or its antipod, or tits antipod, or tits antipod for detecting the presence of a cancer in a patient; a fusion protein comprising at least the polypeptide; an oderately colypeptide; a method for setimulating and/or expanding T cells stringent conditions; a method for setimulating and/or expanding T cells specific for a tumour protein; an isolated T cell population comprising T component consisting of carriers and immunostimulate, and a second component selected from the polynucleotides, proteins, and a second component selected from the polynucleotides, proteins, antibodies, fusion proteins. T cell populations and antigen presenting cells expressing the component in a patient by administering the composition and diagnostic kits comprising at least one of the oligonucleotide of, or an antibody and cetection reagent consisting of a reporter group. The polypeptides are useful as vaccines for the treatment or prevention of polynucleotides are useful as vaccines for the treatment or prevention of the polynucleotides may be used as probes or primers for nucleic acid compunitation and integer presenting cells can be used to etimulate or expand T cells specific for a tumorous protein. The present sequence is one of the 183 lung cancer associated comply and in the present sequence is one of the 183 lung cancer associated compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1055
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  119

determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, or chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/RST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPPO at sequence. The sequence contained in electronic format directly from USPPO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 395

New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for

Claim 15; SEQ ID NO 10603; 80pp; English.

The invention relates to a mucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide superences in the specification, or their complements or fragments, and sequences in the specification. The probe is a single exon probe that this defined in the specification. The probe is a single exon probe that the probes sunder high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-defined in human cells or tissues. Also included are a spatially-defined in human cells or tissues. Also included are a spatially-comprising a plurality of single exon nucleic acid molecule and addressable set of single exon nucleic acid probes for measuring human gene expression, a method of measuring human gene expression, a vector comprising the single exon nicroarray for measuring human gene expression, a vector comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid of any of the above-mentioned amino acid of sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, contiguous and oracids of any of the above-mentioned amino acid of a customer desiring to measure gene expression, a method of provading a customer desiring to measure gene expression data by subscription, and a computer-readable storage medulum which contains a database having a plurality of records cated above. The probes methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying a customer detect the presence of expression of a shigle exon microarrays.

Conted above, the probes are used in identifying and characterising gross alterations in the probes are used in identifying and contains a detecting and characterising gross alterations in the genomic locus that included second in identifying the sequence is a human single exon probe of the invented peptide. The sequence desired in a prince and peptide co patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030194704

Identifying a candidate agent as modulator of function of a target protein for treating cellular proliferation disorders by adding a candidate agent to a mixture of the target protein that directly/indirectly produces ADP or phosphate.

Claim 1; SEQ ID NO 2; 26pp; English.

This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QRSSRSHAVLLVKVDQRERLAPFRQREGKLYLIDLAGSEDNRRTGNKGLRLKESGAINTS 300
domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 2) of the invention.
                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; microtubule motor protein; cellular proliferation disorder; cancer; hyperplasia; restenosis; cardiac hypertrophy; immune disorder; inflammation; kinesin-like DNA binding protein; KID; autoimmune disease; arthritis; graft rejection; inflammatory bowel disease; angloplasty.

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein, and methods of a target protein, modulators of the target protein, and methods of treating callular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor protein useful for treating callular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and angioplasty. This sequence represents a human microtubule motor protein of the invention. Note: The specification states that this sequence is encoded by the nucleic acid featured as SEQ ID NO:1, but this does not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and encodes a naturally occurring kinase polypeptide; (d) encodes the coopypeptide in (a), except that it lacks one or more, but not all, of an N-terminal domain, a creatlytic domain, a C-terminal catalytic domain, a C-terminal catalytic domain, a C-terminal catalytic domain, a C-terminal tail; or (e) is a complement of (d). The nucleic acid molecules, colypeptides, methods and substance are useful for treating cancers, immune-related diseases or disorders, cardiovascular disease, brain or neuronal-associated diseases, and metabolic disorders. The disorders are preferably cancers of the tissues or of hematopoietic origin, diseases of the creatural or peripheral nervous system, Alzheimer's diseases, con parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral infections, infections caused by fungi, ocular diseases, migraines, pain, sexual dysfunction, mood disorders, attention disorders, neurological disorders, neurological disorders, netrological disorders, neurological disorders, netrological disorders, neurological disorders diseases, neurological disorders,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                . This sequence corresponds to one of the kinase polypeptides of
                                                                                                                                                          cytostatic; immunomodulator; cardiant; neuroprotective; nootropic; antiparkinsonian; virucide; antibacterial; fungicide; ophthalmological; analgesic; hypotenelve; immunosuppressive; kinase inhibitor; kinase; cancer; peripheral nervous system; central nervous system; alzheimer's disease; Parkinson's disease; multiple sclerosis; amyotrophic lateral sclerosis; viral infection; prion infection; ocular disease; migraine; pain; sexual dysfunction; mood disorder; attention disorder; cognition disorder; hypotension; hypertension; psychotic disorder; neurological disorder; dyskinesia; metabolic disorder; organ transplant rejection; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated, enriched or purified nucleic acid molecule encoding a kinase polypeptide, useful for treating cancer, immune-related diseases, cardiovascular disease, brain or neuronal-associated diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100.0%; Score 1878; DB 7;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a method for modulating the expression of a thanatoe (death) -associated protein (THAP) responsive gene. The method comprises modulating the interaction of a THAP-family polypeptide or its biological fragment with a nucleic acid, and so enhancing or repressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        THAP responsive element; angiogenesis; inflammation; metastasis; cancer; apoptosis; cardiovascular disease; neurodegenerative disease; chemokine; antiangiogenic; antiinflammatory; cardiovascular; cytostatic; neuroprotective; osteopathic; THAP modulator; THAP synthesis modulator;

the expression of the THAP responsive gene. Also described: (1) a method cf modulating the expression of a gene responsive to a THAP chemokine complex; (2) a pharmaceutical carrier; (3) a transcription factor decoy element in a pharmaceutical carrier; (3) a transcription factor decoy consisting essentially of a THAP responsive element; (4) a cell comprising a transcription factor decoy described above; (5) methods of comprising a transcription factor decoy described above; (5) methods of polypeptide or its biological fragment, or a nucleic acid and a THAP-family polypeptide or its biological fragment, or a nucleic acid and a THAP-family polypeptide or its biological fragment, or a nucleic acid and a viral vector which comprises a promoter operably linked co a nucleic acid encoding a THAP-family polypeptide or its biological ercombinant THAP-family polypeptide; (8) a method of constructing, a cell which expresses a respectated with a condition mediated by a THAP/chemokine complex; (5) methods of identifying a test compound that modulates transport of a THAP responsive element or that modulates the transport of a sasociated with a condition selected from excessive or insufficient associated with a condition selected from excessive or insufficient appropriae, cardiovascular disease and neurodegenerative conspicution associated with a condition resulting the symptoms associated with transcriptional repressive or insufficient cappotosis, cardiovascular disease and neurodegenerative contints associated with transcriptional repressive or insufficient comprising a theorem or THAP-family polypeptide in an individual; (11) a vector expension of a THAP responsive promoter operably linked to a mucleic acid comprising a detectable product; (12) a genetically engineered call comprising the vector described above or that expression or activation reaction comprising and an RAP polymerses, and in invited to a mucleic comprising the vector described acid comprising a number of described acid comprising a number of described acid angiogenesis, inflammation, metastasis of a cancerous tissue, excessive or insufficient apoptosis, cardiovascular disease or neurodegenerative diseases. The present sequence is used in the exemplification of the reducing symptoms of conditions such as excessive or insufficient present invention

human; enzyme; motor domain; kinesin-like DNA binding protein; KID; cytostatic; cardiant; immunomodulator; antiinflammatory; gene therapy; cancer; hyperplasia; restenosis; cellular proliferation disorder; cardiac hypertrophy; immune disorder; inflammation. Identifying a candidate agent as modulator of function of a target protein for treating cellular proliferation disorders by adding a candidate agent to a mixture of the target protein that directly/indirectly produces ADP or phosphate. Human kinesin-like DNA binding protein (KID) (SeqID 4). /note= "Encoded by CA" Location/Qualifiers ADC23340 standard; protein; 512 AA. 20-APR-1999; 99US-00295612. 20-JUN-2000; 2000US-00597292. 28-NOV-2000; 2000US-00724224. Beraud C; ADC23340; RESULT 5 ADC23340 g

This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor or phosphate. Furthermore, this activity or be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatorise. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperasias, trestenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 4) of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ATPase activity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein, and act as a target protein, modulators of the target protein, and methods of treating candiar proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA

binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and angioplasty. This sequence represents a human microtubule motor protein of the invention. Note: The specification states that this sequence is encoded by the nucleic acid featured as SEQ ID NO:3, but this does not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         242

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                      pystems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 6) of the invention.

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ATPase activity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA binding procein (KID) and for inhibiting KID. The sequences are used for creating for modulators of motor proteins useful for treating disorders and inflammation for treating cancer, hypertrophy, immune disorders and inflammation, for treating disorders or proliferation disorders and inflammation, for treating disorders and inflammation, for treating disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders and inflammatory bowel disease and proliferation induced after medical procedures including surgery and proliferation induced after medical procedures including surgery and consideration induced after medical procedures including surgery and consideration induced after medical procedures including surgery and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consideration and consid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             325

The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, valnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polymucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57031 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        issociated gene sequences, referred to as prostate cancer for treatment, prevention, and diagnosis of disorders

This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 8) of the invention.
                                                                                                           263
                                                                                                                                                                                 323

acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target cancer, hyperplasias, restenois, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular corrections, immune disorders and inflammation, for treating alsorders and inflammation, for treating autoimmune disorders and inflammation, for treating autoimmune cassociated with KID and for inhibiting KID and for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and angioplasty. This sequence represents a human microtubule motor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LKYQFDAFYGERSTQQDIYAGSVQPILRHLLEGQNASVLAYGPTGAGKTHTMLGSPEQPG

                                                                                                                                                                  capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABR2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel human polynuclectide and the encoded polypeptide. A polynuclectide of the invention may have a use in gene therapy. An oligonuclectide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynuclectides as a probe for detecting the polynuclectide. The polynuclectides ADM01316-ADM01376 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating thair expression and activity, or as a target of gene therapy. The proteins ADM01759-ADM06201 encoded by the polynuclectides are useful as pharmaceutical agents. The present sequence represents a protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       43 RVRVAVRLRPF - - VDGTAGAS - - - - - DPPCVRGMDSCSLEIANWRNHQETLK - YQFDAF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      LIDLAGSEDNRRTGNKGLRLKESGAINTSLFVLGKVVDAL-NQGLPR-VPYRDSKLTRLL

```

```
The present sequence represents a structural and cytoskeleton-associated polypeptide (SCAP). The SCAP polypeptides and polynucleotides of the invention are useful for diagnosing, preventing or treating diseases or conditions associated with aberrant expression of SCAP, such as cell

              infections (e.g. HIV) or neurological disorders (e.g. Parkinson's disease, Alzheimer's disease or stroke). These may also be used for assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of SCAP. The SCAP or its fragments are also useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           329

(1). (1) is useful for screening addulators of Hakipad. The method concentration, and assaying for the level of Hakipad activity, where the concentration, and assaying for the level of Hakipad activity, where the Hakipad activity is from binding activity or Arpase activity, where the change in activity between the test and control concentration indicates a modulator. A composition containing (1) is useful in the treatment of inflammation, cardiac hypertrophy, cellular proliferation diseases e.g. hyperplasias, restenosis, cancer, including solid tumours of skin, brain, lung, heart, bone, genitourinary tract, liver, nervous system, adrenal glands, haematologic, gynaecological and testicular carcinomas, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease, proliferation induced after medical procedures, such as surgery, angioplasty. The motor domains may also be used in nanotechnological applications, and polymucleotides encoding the proteins is further useful for inclusion on GeneChip (RTM) array or for use in expression monitoring. This is the amino acid sequence of the novel human contor protein Hakipad motor domain, described in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  401 Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
